EcoBroker designation assists agents in working through issues that may arise in any real estate transactions such as mold, radon, and poor indoor air quality, providing real solutions for their clients. EcoBrokers are able to provide their clients with valuable energy and environmental information through their expert training, knowledge, and access to resources, and ongoing required continuing education.

What Is An EcoBroker?

EcoBroker is an education and certification program for real estate professionals who care about the environment and want to promote energy efficient and "green" features in homes and buildings. Founded in 2002, EcoBroker is the first and largest green real estate training and communications program in the world. Real estate professionals wishing to obtain the EcoBroker designation must take a series of courses taught by experts in the green industry, that provide them with addition training in energy and environmental issues as they relate to real estate. This training allows the agent to become a Certified EcoBroker providing the agent with the tools and resources to assist their clients in finding properties that provide affordability, comfort, a healthier environment, and reduce their carbon footprint.

EcoBrokers are equipped with additional energy and environmental information and tools that help them provide added value to all of their real estate transactions. EcoBroker training helps the real estate agents address the newest topics in real estate, such as "green" home certification programs like Energy Star Qualified Homes, energy-efficiency, and environmentally sensitive design.

As a consumer, an EcoBroker can provide valuable knowledge to help you evaluate the energy efficiency of a potential home. Costs and savings associated with insulation, windows, appliances, heating and cooling systems, and other features of the home can affect the monthly cost of operating the house for as long as you own the home, resulting in ongoing savings. A qualified agent can help you evaluate environmental issues that might affect your new home, including indoor air quality, ventilation, use of low VOC paints and other products, and reliable water testing. EcoBrokers can help sellers market their properties through their understanding of the energy efficiency and environmental features of homes. EcoBrokers can help sellers highlight any such features and get the best price for your home.

EcoBrokers are not necessarily energy or environment experts, but they have more resources at their disposal to help buyers and sellers make better real estate decisions. Their understanding and awareness of the issues allows them to convey that understanding to their buyers and sellers.

If it plugs in or runs on batteries we'll probably take it. Our current rates on fee items are on our website. Most items we accept at no charge.

All hard drives and cell phones destined for reuse are cleared according to the National Institute of Standards and Technology Guidelines for Media Sanitization.

When your items are refurbishable, they can be available to people and organizations that might otherwise struggle to afford them.

We have a zero landfill policy. Nothing is sent overseas to unreliable processors.
